Wetland system reconstruction on traditional pa site, to help enhance Waikato River.

"The project's primary objective is to restore and protect the health and wellbeing of the Waikato River.

The project is situated on the St Peter's farm which is a significant area for Ngāti Hauā as traditional pā sites were located within, namely the Ariki-rua pā site. The proposed workable site is a wetland system totalling 2.5ha. The wetland system to be reconstructed is situated on a dry-stock block which filters into the Waikato river directly. Proposed works include site preparation, planting and maintenance, fencing, monitoring, infill planting, community planting days an cultural learning.

This project received funding from the Waikato River Authority (WRA 16-021).
