To support and restore privately owned gully areas in Hamilton

This project is complimentary to the existing Gully Restoration Programme initiatives. The project is aimed at education and practical outcomes relating to the restoration of privately owned gully areas.

A prioritised catchment based approach to cleaning up our streams and creating links with natural vegetation and improved stream life.

This project will benefit the community and help with education of landowners whose properties back onto gullies with Hamilton.

This project received funding from the Waikato River Authority (WRA 12-040)
