To clean the waterway and surrounding reserve at Lake Koromatua

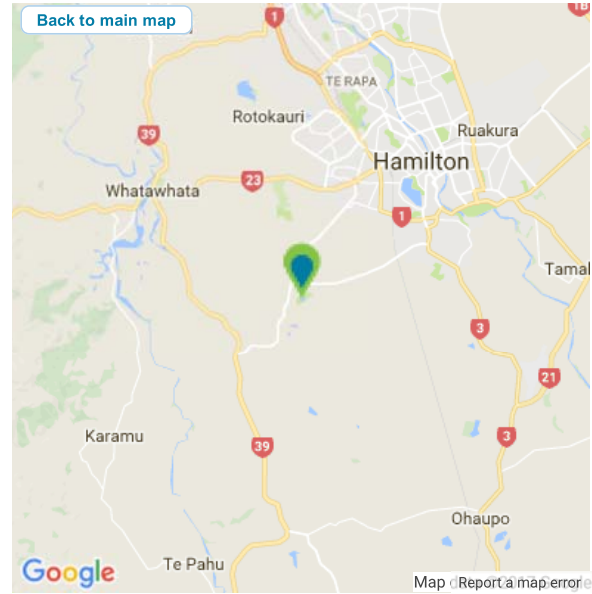

Lake Koromatua restoration programme – clean up the waterway and surrounding reserve – replace exotic vegetation with indigenous fauna and flora – build a bunded walkway and water filter – two year project.

This project will provide permanent access across part of the wetland – and create a pond to act as a sediment trap and water filter for lake inflows.

This will deliver cleaner water to the Koromatua Stream.

This project is funded by the Waikato River Authority (WRA 11-036)
