0

This is a project to restore an area of riparian margin on the shores of Lake Rotongaro.

Landowner proposes to increase and re-fence the lake margin with a three wire electric fence to incorporate more of the low lying rushland and rough pasture in addition to fencing off more wetland areas.

The project will be completed over a two year time frame with all fencing completed in the first year and planting split between two seasons. WRA 15-013
