To develop the Raukawa Environmental Management Plan

This project involves the development of a Raukawa Environmental Management Plan (EMP).

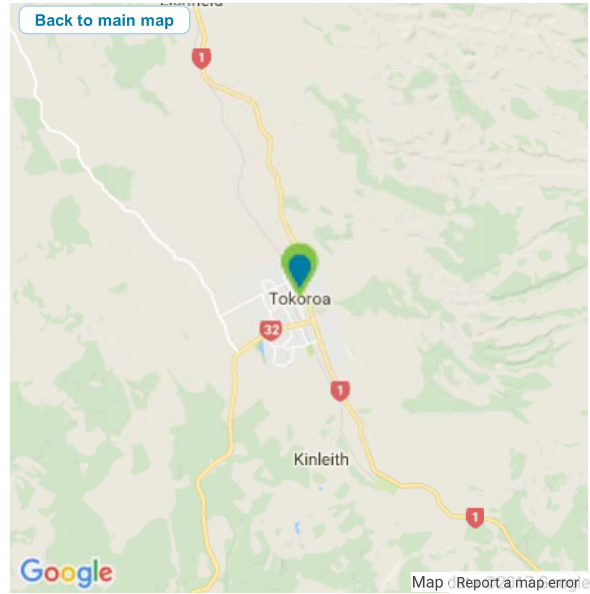

The development of the EMP will result in Raukawa, and external users, taking a more proactive approach to resource management within the Raukawa rohe, including the Waikato River and its catchment.

One of the main objectives is to reclaim mātauranga Māori specific to our use and management of our environment, including the Waikato River and its catchment. The EMP will also provide the opportunity to reconnect Ngā Uri o Raukawa with Papatuanuku and Ranginui through innovative and hands on methods.

The benefits of an Iwi EMP will not only be internal to Raukawa but will also extend to external users of the plan, including other River Iwi, key stakeholders in the Raukawa rohe and the wider community. Raukawa are committed, through the development of the EMP, to sharing mātauranga Raukawa pertaining to the environment to ensure a collaborative and comprehensive approach is taken to the restoration and enhancement of our taonga, including the River.

This project received funding from the Waikato River Authority (WRA 11-069)
