
The mine produced 13,159 t of zinc concentrate and 7,755 t of copper-lead concentrate, along with 3,050 kg of silver and 69 kg of gold, from 163,000 t of ore.
Over the years a number of works designed to contain and stabilise the tailings have been undertaken. However all of these have been ad hoc, quick fixes to address immediate problems. None have reduced ongoing stability issues or improved water quality discharging from the site.
